

BOOTSTRAP

This worksheet aims to be the first contact with the CSS framework Bootstrap. The purpose of these exercises is to explore the framework components, by modifying the webpages from the previous class to look like it is represented in the video "02_Bootstrap Worksheet Demo", available on Moodle.

1) MY FIRST BOOTSTRAP PAGE

- a) Create the folder "CAD/Worksheets/02-Bootstrap" to place the initial code of this worksheet. It is important to follow this structure to later use GIT. Copy to the folder all HTML files from the previous worksheet.
- b) Inside the folder "CAD/Worksheets/02-Bootstrap" create a page "starter.html" with the "Starter template" from Bootstrap documentation (<https://getbootstrap.com/docs/5.1/getting-started/introduction/>).
- c) Check if the solution is HTML compliant.
- d) Commit and push your changes to the remote repository.

2) HOME SWEET HOME

- a) Reimplement the Dashboard (index.html) for the Home Sweet Home page (from previous class) using Bootstrap's Cards.
- b) Add a navigation bar that allows to navigate between the Dashboard and the History.
- c) Reimplement the History page (history.html) using the CSS table component from Bootstrap.
- d) Check if the solution is HTML compliant.
- e) Commit and push your changes to the remote repository.
